

Saorinians Step-by-Step Guide

Use this guide during the mock-up demonstration to install the system, sign in with demo users, and walk through the three role experiences.

A. Requirements

• A local PHP server such as XAMPP, WAMP, MAMP, or a PHP Apache/MySQL setup.

• PHP with PDO MySQL enabled, MySQL/MariaDB, and a browser.

• Place the php-student-management folder inside the web server document root, commonly htdocs.

B. Installation

• 1. Copy the project folder into the web root.

• 2. Start Apache and MySQL from the local server control panel.

• 3. Open phpMyAdmin or MySQL CLI.

• 4. Import php-student-management/database.sql. It creates the student_management database, tables, foreign keys, and sample data.

• 5. Open config/database.php and confirm DB_HOST=localhost, DB_NAME=student_management, DB_USER=root, and the password matches the local MySQL setup.

• 6. Open config/app.php and confirm BASE_URL matches the folder URL, normally http://localhost/php-student-management/.

• 7. Visit the BASE_URL in a browser. index.php redirects to login.php.

C. Demo Accounts

• Administrator: username admin, password admin123.

• Teacher: username teacher1, password password123. A second teacher is teacher2.

• Student: username student1, password password123. Students student2 and student3 are also seeded.

• For a real deployment, change demo passwords immediately and do not expose database credentials in public source control.

D. Login and Navigation

• 1. Enter username and password on login.php.

• 2. Select Sign In. login() verifies the stored password hash.

• 3. The system writes role and user information into the session.

• 4. dashboard.php reads the role and loads the matching workspace.

• 5. Use the navigation bar or dashboard quick actions to open modules.

• 6. Select Logout when finished.

E. Administrator Walkthrough

• 1. Sign in as admin.

• 2. Open Manage Users to add, edit, or remove users and review profile details.

• 3. Open Registrations to approve or reject teacher/student requests submitted through register.php.

• 4. Create or update a course in Manage Courses.

• 5. Create a section in Manage Sections, choose a course, teacher, room, schedule, and capacity.

• 6. Open Section Students or Enrollments to place students in the section.

• 7. Open Announcements, add a title and message, then choose the audience.

• 8. Open Teacher Workload or Teacher Sections to verify teaching assignments.

• 9. Use Messages and Profile for communication and account maintenance.

F. Teacher Walkthrough
