

SAORINIANS

Student Management System Manual

A practical guide for installation, login, and daily use

Prepared for: Santa Clarita International School

System users: Administrators, Teachers, and Students

This manual explains how to install, access, and use the Saorinians role-based student management system. Follow the setup section first, then use the instructions for your assigned role.

1. System Overview

Saorinians is a PHP and MySQL web application that centralizes student profiles, courses, sections, enrollment, attendance, grades, announcements, and behavioral information. The system uses role-based access so each account sees only the tools and records appropriate to its role.

User roles

Role	Main responsibilities
Administrator	Manages accounts, students, teachers, courses, sections, schedules, announcements, and system records.
Teacher	Views assigned sections, records attendance, manages assessments and grades, and reviews authorized student information.
Student	Views personal profile, enrolled sections, grades, attendance, schedule, and announcements.

2. Requirements and Installation

Install a local PHP server before opening the system. Recommended tools are XAMPP, WAMP, or Laragon with PHP 8 or later, MySQL, Apache, and a modern web browser.

Setup procedure

1. Install XAMPP, WAMP, or Laragon.
2. Copy the **php-student-management** folder into the server web directory: **htdocs** for XAMPP or **www** for WAMP/Laragon.
3. Start the Apache and MySQL services.
4. Open **http://localhost/phpmyadmin**.
5. Create or select the **student_management** database.
6. Import the project file **database.sql**.
7. Open **config/database.php** and confirm the host, database name, username, and password match your local MySQL settings.
8. Open **http://localhost/php-student-management/** in a browser.

First access checklist

1. Confirm Apache and MySQL are running.
2. Confirm the project URL opens without a 404 error.
3. Register an account or use an account already created in the database.
4. Log in and confirm that the dashboard matches the account role.

3. Login and Navigation

1. From the landing page, select **Login**.
2. Enter your username and password.

3. Select the login button.
4. The system validates the credentials and starts a session.
5. You are redirected to the dashboard for your role.
6. Use the navigation menu to open the permitted modules.
7. Select **Logout** when finished, especially on shared computers.

If login fails, check spelling, account status, database connectivity, and whether the account has the correct role. Never share passwords with other users.

4. Administrator Manual

Administrators maintain the master data used by the entire system. Complete setup in this order: users, courses, sections, teachers, and student enrollments.

Manage users and profiles

1. Open the administrator dashboard and choose the user or profile management module.
2. Add a user with a unique username, complete name, role, and secure password.
3. Save the record and confirm the role is correct.
4. Update contact or profile details when information changes.
5. Deactivate or remove records only when authorized, because related academic records may depend on them.

Manage academic records

1. Create or update courses with a course code, name, description, credits, and status.
2. Create sections and connect each section to a course and teacher.
3. Set room, schedule, capacity, and active status.
4. Enroll students in the correct sections.
5. Review the resulting section and enrollment records before the term begins.

Announcements and monitoring

1. Create an announcement with a title and message.
2. Choose the target audience: all users, administrators, teachers, students, or a section.
3. Set the announcement as active and save it.
4. Review attendance, grades, and behavioral records from the appropriate management pages.

5. Teacher Manual

Teachers work with sections assigned to them. Only enter information for the correct class, student, date, and grading period.

Attendance

1. Log in using the teacher account.
2. Open the assigned section or attendance module.

3. Select the attendance date.
4. Mark each enrolled student as present, absent, late, or excused.
5. Add remarks when clarification is needed.
6. Save and review the entries before leaving the page.

Assessments and grades

1. Create an assessment for the correct section.
2. Enter its title, type, grading period, maximum score, weight, and due date.
3. Open the assessment grade-entry page.
4. Enter scores only for enrolled students.
5. Save the grades and check that the calculated result is correct.
6. Update a grade only when there is a valid correction or approved submission.

6. Student Manual

1. Log in with your student account.
2. Open your dashboard to see available academic information.
3. Review your profile and report incorrect personal details to an administrator.
4. Open enrolled sections to check subjects, teachers, rooms, and schedules.
5. Open grades or assessments to review scores and grading periods.
6. Open attendance to review dates and statuses.
7. Read active announcements relevant to you.
8. Log out after completing your session.

7. Troubleshooting and Support

Database connection error

Make sure MySQL is running, the database was imported, and the credentials in **config/database.php** are correct. If the database name or password is different from the default local configuration, update the file and reload the page.

Access denied or wrong dashboard

Log out and sign in again. Confirm the account role in the users table and verify that the requested page belongs to that role. Do not bypass role restrictions by editing URLs.

Missing records

Check that the record was saved successfully, the correct section or date was selected, and the account has permission to view it. Contact the administrator if the data still does not appear.

Recommended support information

When reporting a problem, provide the page name, the action performed, the exact error message, the user role, and the date/time of the issue. Do not include passwords.

8. Quick Reference

Task	Where to begin
Install system	Server directory → Apache/MySQL → phpMyAdmin → database.sql
Log in	Landing page → Login → credentials → role dashboard
Record attendance	Teacher dashboard → section → attendance date → statuses → save
Review grades	Student dashboard → grades/assessments
Publish notice	Administrator dashboard → announcements → audience → save

End of manual. Keep this guide with the project documentation for demonstrations, onboarding, and system support.
